## The Nation's Source for Scientific Information

The National Technical Information Service (NTIS), is the nation's largest and most  
comprehensive source of government-funded scientific, technical, engineering and business-  
related information.

For more than 60 years, we have served as an innovative resource to Federal agencies,  
businesses and universities looking for high-caliber information. Our mission is straight-forward:  
to support the nation's economic growth by providing access to information that stimulates  
innovation and discovery.

While you can find information on virtually any subject on the web, there's no guarantee  
that the information is accurate — or that it has been published by a legitimate source. NTIS  
undergoes a rigorous process to ensure that all the information we offer is authentic and  
credible. This integrity, along with the breadth and depth of our collection, is why NTIS is  
regarded as the nation's preeminent source of government information.

The National Technical Reports Library (NTRL) enhances accessibility to the NTIS technical reports collection. It provides access to:

- Bibliographic records of more than 2,000,000 technical reports
- Downloadable full text of 600,000 of these reports in PDF format

Subscription rates are based on institutional FTE levels.

The NTRL operates on a system interface that allows users to do queries on the large NTIS bibliographic database. The intent is to broadly expand and improve access to over 2.5 million bibliographic records (pre-1960 to present) and 500k full-text documents in PDF Format that are directly linked to that bibliographic database.

## Subject Category Codes/Classification

NTIS classifies citations into 39 subject categories. Each of these subject categories is divided into subcategories. This method provides sorting categories for both hard and soft sciences. All subject categories consist of three character codes: two numerics and one alpha character. The numeric codes represent entire categories, the alpha codes are used to designate subcategories within these broad categories. The number of NTIS subcategories posted to an information product average from one to five, although there are some reports with more.
